FlexMeasures Technical Steering Committee

January 14, 2026

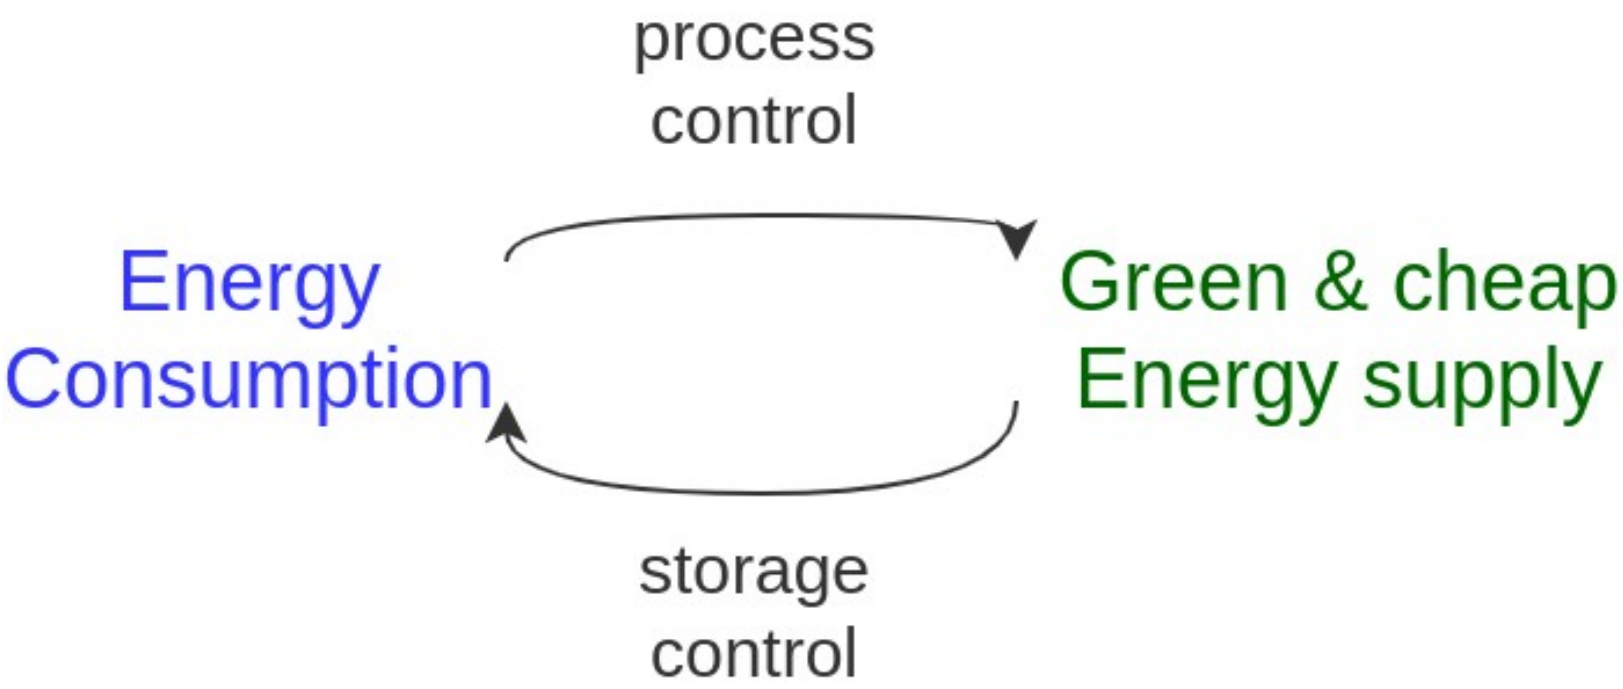
LF ENERGY FlexMeasures

Agenda

- Welcome & Short introduction to FlexMeasures
- What’s new in v0.31?
- Roadmap for v0.32 and 1.0
- Community issues: Discord? FOSDEM?
- Q&A

LF ENERGY FlexMeasures

The matching challenge



LF ENERGY
FlexMeasures

FlexMeasures is the intelligent & developer-friendly EMS to support real-time energy flexibility apps.

Go green in daily operations, stay in control.

- Smart industry
- Smart city

LF ENERGY FlexMeasures

FlexMeasures - simple

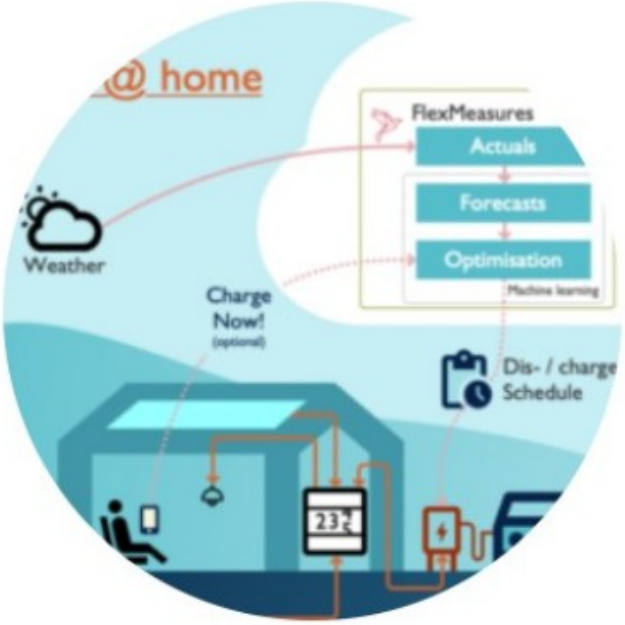
LF ENERGY
FlexMeasures

Use case: SteerOnCO_2 at Rijnland Water Board

We help water board Rijnland to only run their centrifuges for sludge dehydration when the CO_2 footprint in the grid is low.

Use case: SteerOnPrice & SteerOnSolar at V2G@Home

We optimize (dis)charging of Nissan Leaf cars with Wallbox chargers to save costs and use solar power, with zero user interaction needed.



Version 0.31 is coming!

- Improved data upload
- Forecasting through API
- GET /assets API: subtree selection, less IO load
- Enable querying JSON fields
- Custom SwaggerDocs Intro
- Several small fixes & improvements (see link below)

https://github.com/FlexMeasures/flexmeasures/pulls?q=is%3Apr+milestone%3A0.31.0+is%3Aclosed

LF ENERGY FlexMeasures

Scheduling: State of the art

Done

- Storage: Battery
- Storage: Heat
- Processes
- Sites
- Sector coupling
- Multi contractual commitments (not in UI yet)

Next

- CEMS
- Available flex (offer to grid, aggregators, ...)
- Distinct power bands

LF ENERGY FlexMeasures

On the road to milestone v1.0

- **Site optimization (multi-asset).** Why? Fulfill crucial milestone of mission. Previous/current solution? Optimize flexible assets in sequence. Progress? Done.
- **Editable flex-model and context.** Why? Ease of use & maintenance for non-developers. Previous/Current solution? Send all info in API. Progress? UI support (95%) done, usable.
- **Support all energy units in the API** Why? Diversity in data per project/site. Previous/current solution? Early work required to use MW only, or send data in sensor unit. Progress? If unit is convertible, FlexMeasures accepts the data. Most recently: data upload form: PR#1863

LF ENERGY FlexMeasures

On the road to milestone v1.0

- **Better API support for developers.** Why? Modern developers want to work against an active API. Previous/current solution? API endpoints only ReadTheDocs, input schemas not documented, no way to try out. Progress? Fully mogrsted to OpenAPI, each FM instance offers SwaggerUI.
- **Robustness to datetimes ingestion.** Why? FM internally wants events “on the clock” for computing. Previous/Current solution? Send data “on the clock”. Progress? New story: Flooring when data comes in.
- **Full (basic) roundtrip in UI** Why? All functionality should be possible Previous/current solution? More API & CLI based. Progress? Graph config & Flex config in UI was basis, new plan: basic forecasting & scheduling button. Reports config out of v1.0 scope.

LF ENERGY FlexMeasures

Discord?

- Slack disappears messages after 90 days
- Other candidates: Discord, Zulip, ?

FOSDEM

- 31 Jan & 1 Feb 2026, Brussel - free
- Talk: “Community energy management with FlexMeasures, fully scriptable”
- https://fosdem.org/2026/schedule/track/energy/
- Let us know if you come!

LF ENERGY FlexMeasures

Q&A

- What are you working on?
- What is unclear?
